

Confidently manage complex medical cases

Aim

To enhance the confidence and competence of general dental practitioners in assessing and managing patients with complex medical histories, with a focus on surgical considerations, and clinically significant drug interactions and effects relevant to dental care.

Learning objectives

- Understand the latest guidance on MRONJ-related medications
- Evaluate the implications of corticosteroid therapy
- Identify and manage important drug interactions in dental care
- Apply clinical decision-making strategies in surgical care for complex patients.
